Query Folding has automatic compatibility with DirectQuery and Dual storage modes.

**Explanation**

The benefits to query folding include:

1. More efficiency in data refreshes and incremental refreshes. When you import data tables by using query folding, Power BI is better able to allocate resources and refresh the data faster because Power BI does not have to run through each transformation locally.
2. Automatic compatibility with DirectQuery and Dual storage modes. All DirectQuery and Dual storage mode data sources must have the back-end server processing abilities to create a direct connection, which means that query folding is an automatic capability that you can use. If all transformations can be reduced to a single Select statement, then query folding can occur.

True

False

Which of the following option(s) are valid sign-in options when connect to an On-premise SQL server database ?

A. Windows account (AAD credentials)

B. Database Credentials

C. Microsoft account credentials

D. All of them

Vizle

11

Read the statement and indicate if the statement is true or false.

When data is refreshed in the Azure Analysis Services, Power BI reports will immediately be updated, without the need to initiate a Power BI refresh schedule.

True

False

When connecting to Azure Analysis Services, which option helps you keep the data and DAX calculations in their original location, without having to import them all into Power BI ?

A. Import

B. Dual

C. Power Query

D. Connect Live
