Vizle Create a property field

Set up the fields on a single element.

This will add the property fields to a fields list available to any compatible object within the model.

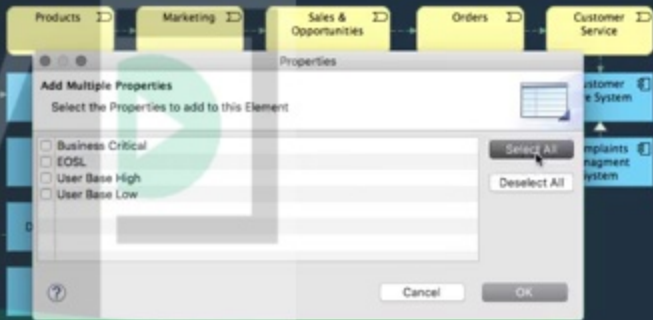

V

Vizle

Add the field list to other elements

Field lists need to be added one at a time to each element, selecting multiple elements will only add the fields selected to the first element selected.

V

Vizle

Managing the property field list.

The field list can be managed at the model level. Any changes to the list in the management window will be applied to all objects referencing that field.

Vizle

Searching the field values

The search function will provide the option to filter on property fields and their values.

Search will apply a filter in the model window of any object that has the selected object type or selected property field.

The search value will then search on the filtered objects.

The screenshot shows a software interface with a search bar at the top containing the text "Low". Below the search bar is a tree view of application components under the heading "CRM Example". The components listed are: Campaign Management, List Management, Pricing Calculator, Product Catalogue (highlighted in blue), Product Development, Rewards & Compensation, and VIP Listings. Below the tree view is a "Properties" window for the selected "Product Catalogue (Application Component)". The properties window has a table with the following data:

Main	Name	Value
Properties	Business Critical	Low
Analysis	EoS	10/10/21
	User Base Low	5
	User Base High	15
