The Agile Manifesto

Here are some of the principles that need to be followed to a make a process agile:

1 Customer Satisfaction

You need to satisfy the customer through early and quick delivery of the product

Kanban

- This method is used to design, manage and improve the flow of systems
- Organizations can visualize their flow of work and limiting their work in progress

What is Agile? - Advantages

Let's now have a look at some reasons as to why Agile was so successful:

High quality development, testing and collaboration is ensured, since the project is broken down

The product backlog can be refined and re-prioritized

The teams can maximize project value, since clients can provide project priority

The needs of the customers can be focused on, increasing the value delivered

Scrum Artifacts

Scrum Artifacts are components of the Scrum process that can improve transparency and understanding of the work. Three artifacts used in the process:

Sprint Backlog

- A subset of the product backlog, the sprint backlog contains tasks that the team aims to complete to satisfy the sprint goal

Product Backlog

Product Increment
